Graco's got you covered

Facilities Worldwide for Global Support

Quality First

At Graco we pride ourselves on providing best-in-class products. Engineered solutions are manufactured in our own facilities, with the highest standards in the industry. We provide you with world-class customer support and expertise to help solve your lubrication challenges.

Global Reach

Graco has facilities and distribution partners across the globe to provide you with the products and service *you* need, where *you* live. Plus, Graco has dedicated field experts in all areas of the world to support the products we sell.

Product Capabilities

Graco has a broad range of products to provide solutions that meet your needs. Our products are engineered and tested to perform in the harshest environments so you can be certain your equipment is protected and working at peak performance.

Well Services

Reliability When and Where You Need It

Reliability in the field is priority one. You can't afford unnecessary downtime at your site due to equipment failure. That's where a Graco lubrication system can keep your equipment working to meet the challenging requirements of on-site well services.

Well Service

Lubrication Solutions

Peace of Mind for Your Bottom-Line

Graco automatic lubrication systems deliver benefit-driven solutions that save you time and money. Perfect for challenging, hazardous and harsh operating conditions of well services. Whether you need electric, hydraulic or pneumatic powered solutions, we've got you covered with multiple levels of control and monitoring.

- 1 G3™ Pump and Control**
An advanced pump design offers multiple levels of control and monitoring. Use feedback from MHH blocks and from your equipment to tailor and monitor the lubrication supply to critical components. Pumps are IP69K rated so no enclosure is necessary. Refilling is clean and easy with the quick connect stud.
- 2 MSP Series Progressive Lubrication Blocks**
Offers time-tested, field proven dependability in the harshest environments. Flow can be monitored using a proximity switch and performance indicators so problems can be pinpointed
- 3 Double Ball Check Valve**
Ensures lubrication goes into the lube point and doesn't get pushed back out. Stops any fluid back pressure from damaging the lubrication system.

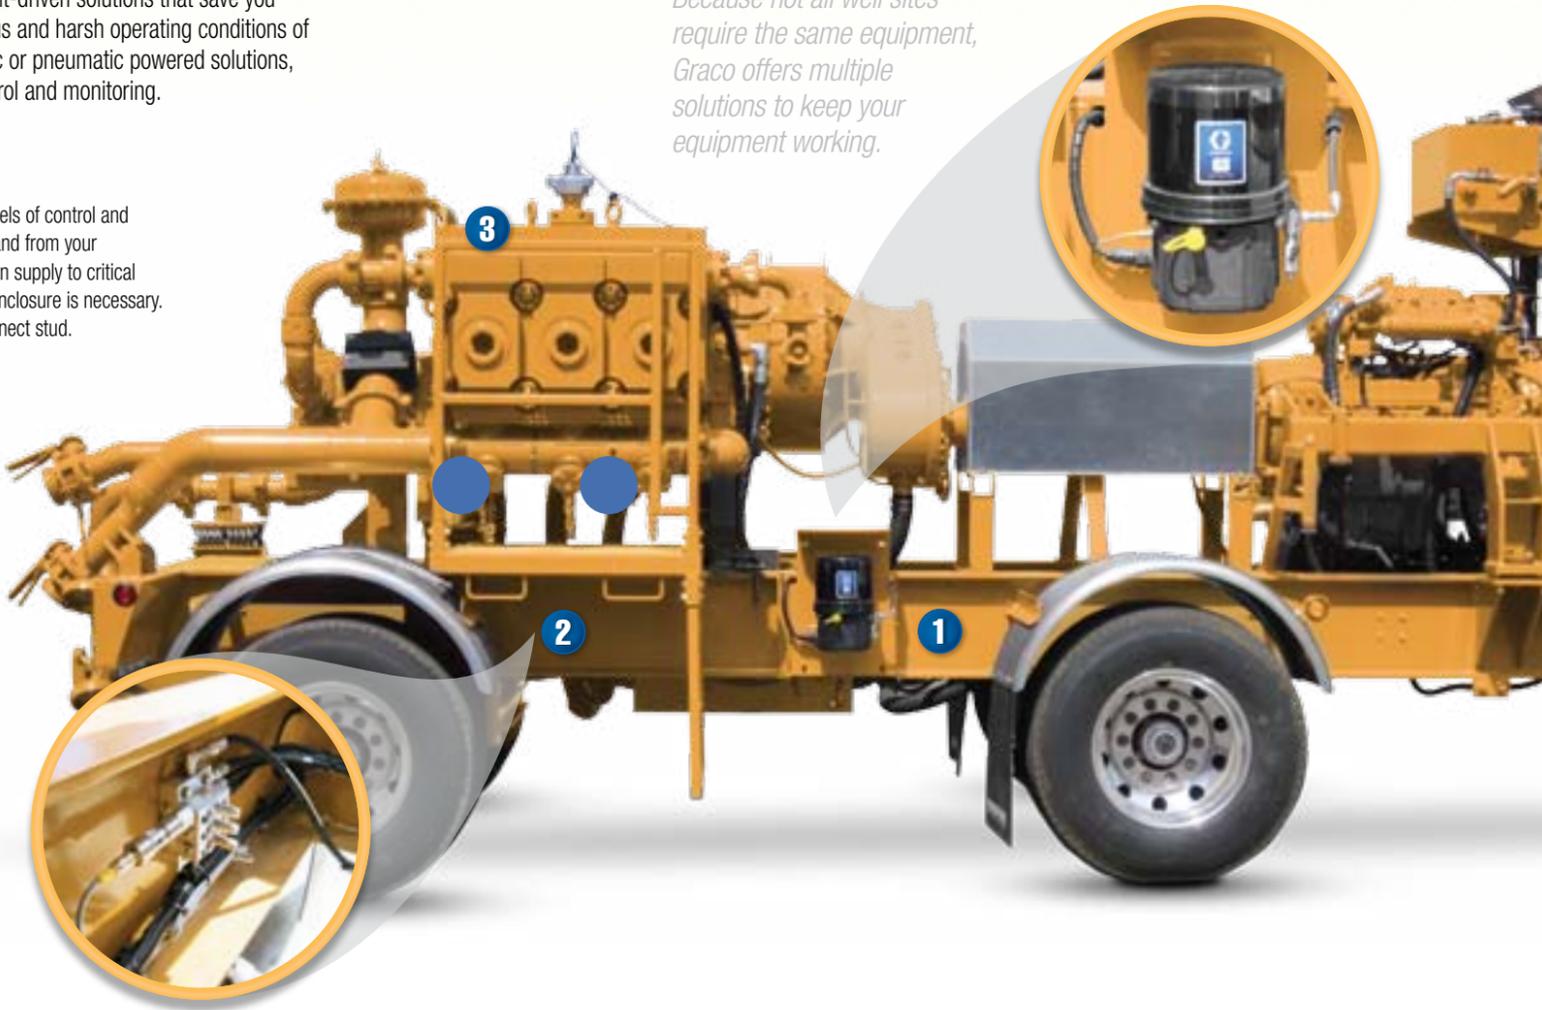

Graco Helps Protect:

Triplex and Quintuplex Fracturing Pumps
Graco provides high pressure lubrication solutions that control and monitor automatic lubrication and let's you know if there is a problem.

Wireline Trucks
Keep your "Slickline" slick by automatically lubricating the bearings on your spools and measuring head. Whether big or small rigs, we have you covered with the necessary pressures and volumes. Unexpected failures are reduced by providing the right amount of lubricant at the right time.

Coil Tubing Trucks
Make manual lubrication of the Coiled Tube Injector a thing of the past. Lubricate during the tube injection process to keep skate rollers from seizing up. The optimal time to lubricate is while your equipment is working to push out contaminants and reduce component wear. Monitor and control right from the cab for precise lubrication of your equipment.

Because not all well sites require the same equipment, Graco offers multiple solutions to keep your equipment working.

Acidizers and Cement Pumps
Similar to the Fracturing Pumps these units operate under high pressure and pump critical material into the well bore. Pump dependability is essential. By continually lubricating the pump piston seals while in operation, pump dependability and working life will reach new highs.

Blenders
The augers on a blender unit have a tough job mixing sand, particulates and other proppants on a continual basis. Longer auger bearing life will be achieved by continually lubricating the top and bottom critical auger bearings while in operation. The continual lube pressure will flush out contaminants and moisture that can be damaging to these bearings.

Take Control of How You Monitor

You choose the level of control you require—Standard, PRO or MAX. Plus Graco offers our proprietary Data Management System™ (DMS) as an option on MAX control models. You gain a distinct advantage from information that offers accurate time-stamped operation, fault data, and downloadable on/off time programming. Preferred lube cycle program can be stored and transferred to other G3 pumps in your fleet for quick and accurate repeatability.

Standard G3
Turn the pump on or off and can provide a low level warning signal all through your on-board PLC.

Pro G3
Simple ON/OFF time control with low-level sensing and manual run operation.

Max G3
Full control that monitors lube flow via cycle counts and time. Monitors machine counts to match lube flow to machine use. And monitors low fluid level. Manual run and DMS are high value options.

Pre-calculated lube rates and programming routines are available upon request for most applications.
